CAMBRIDGE AI ACADEMY · INTENSIVE MASTERCLASS · 120 MINUTES

Building AI Agents for Real Business Growth: before you arrive

Please complete this checklist **at least 2 days before the session**. Set-up takes about 45 minutes. In class, every minute goes on building, not installing.

1 Bring on the day

- [ ] **A laptop** (Windows 10/11, macOS 12+ or Linux) that you can install software on.
  Tablets, Chromebooks and phones will not work. If your college laptop is locked down, tell us now (see section 5).
- [ ] **Your charger.** The session runs for two hours and sockets are limited.
- [ ] **Your phone**, for two-factor sign-in codes.
- [ ] **Your passwords** for the accounts below. You will sign in to all of them on the day.

2 Install this software

TOOL	WHY WE NEED IT	GET IT	
Google Chrome or Microsoft Edge	Whiteboard, n8n and dashboards	google.com/chrome	Required
Git	Download and deploy the project code	git-scm.com/downloads	Required
Node.js 22 LTS	Runs the agent and the tools around it	nodejs.org	Required
VS Code	Code editor	code.visualstudio.com	Required
flyctl (Fly.io CLI)	Deploy your agent to London in Module 4	fly.io/docs/flyctl/install	Required
Claude Code	Watch and drive an agent fixing code in the terminal	claude.com/claude-code	Recommended

TOOL	WHY WE NEED IT	GET IT	
Docker Desktop	Run n8n locally if you skip n8n Cloud	docker.com	Optional

3 Create these free accounts

GitHub Required
Holds your code and hosts static pages. github.com/signup

Google account Required
Gmail and Google Sheets are the tools your agents use through MCP.

n8n Cloud (free trial) Required
Builds the supervisor and worker flow in Module 3. n8n.io

Claude Required
The model layer. Sign in at claude.ai. We supply API keys for class.

Fly.io Required
Hosts your live agent. fly.io/app/sign-up. The trial may ask for a card.

Stripe (test mode) Required
Adds a checkout. Test mode only: no real money moves. stripe.com

Slack Optional
A third MCP connector to try. Any free workspace works.

Groq Optional
Fast inference to compare with Claude. console.groq.com

Under 18, or no bank card? Some providers (Fly.io, Stripe, model APIs) need you to be 18+ or to add a card. Don't use a parent's card without their permission. Create the accounts you can, and we will pair you with an instructor account for the rest. You will still build and deploy everything.

Never share secrets. API keys, passwords and recovery codes stay private. Don't post them on the whiteboard, in chat or in code you push to GitHub. In Module 4 we store them in a key vault.

4 Check it all works (5 minutes)

Open a terminal (Terminal on macOS, PowerShell on Windows) and run each command. Each one should print a version number.

- [ ] `git --version`

- [ ] `node --version`
  Should be v22 or newer.
- [ ] `fly version` and then `fly auth login`
  Opens your browser to sign in.
- [ ] Sign in to GitHub, n8n, Fly.io and Stripe in Chrome and stay signed in.
- [ ] Open the session whiteboard: canva.link/6ruoc3i38l9870d

5 Think ahead

- [ ] **Bring one idea.** Pick a task you repeat every week, the tools it touches and who should check the result. You will turn it into a bot.
- [ ] **Locked-down college laptop?** If you can't install software, email the organiser before the session so we can arrange a loan laptop or a browser-only route.
- [ ] **Stuck on set-up?** Arrive 15 minutes early. Marianna and the team will check laptops at the door.

6 On the day

📶 Wi-Fi
Network and password are on the welcome slide and on the board at the door.

🔗 Whiteboard
canva.link/6ruoc3i38l9870d. Add a sticky note with your name.

🕑 Timing
120 minutes, with a 5-minute break at 00:55.

🚀 You leave with
A deployed agent at a public URL with a test Stripe checkout.
